2021/01 – 2022/12 Khulna, Bangladesh	**Web Development** *Web Design and Development Diploma Training-2021, IT Future Institute*

Projects

1. Job Portal ⌷

In refining the job portal website, I prioritize enhancing the employer panel functionalities, including job posting, tracking job views and applicant counts. Additionally, I focus on empowering employers with features like viewing user CVs and updating company information. Through role-based permissions, I ensure secure access while enabling seamless profile updates and password changes for enhanced user experience.

2. Freelancer Marketplace ⧉

The buyer panel in my Freelancer marketplace streamlines hiring and project management. It features subscription-based job posting, auto-hiring once a freelancer's profile is 100% complete, and options for job revisions and acceptance. Buyers can file complaints against misbehaving freelancers, and secure payments are handled via Stripe, ensuring transparency and efficiency.

3. Rate Schedule and Estimate Preparation System (RSEPS) ⧉

In crafting the Rate Schedule and Estimate Preparation System (RSEPS), I leverage various business systems to streamline project estimation and categorize them by financial year. This includes implementing role-based permissions to ensure data security and access control, enabling efficient management of kabikha projects. RSEPS empowers organizations with seamless integration, precise estimation, and enhanced financial planning capabilities.

4. E-commerce ⧉

In constructing the e-commerce website, I've implemented robust features for seamless order and product management. Users can efficiently manage products, including attributes like color and size, while backend capabilities enable effortless coupon addition and order fulfillment. Through integrated coupon systems and backend order management tools, customers can enjoy streamlined purchasing experiences, enhancing overall satisfaction and efficiency.

Skills

Frontend ● ● ● ● ○
HTML, CSS3, Bootstrap 5,
 JavaScript, jQuery, Ajax, Axios

Backend ● ● ● ○ ○
PHP, Laravel, Livewire, REST API, OOP
MySQL, Git

Certificates

Web Development
Organization: IT Future Institute
 Course Date: January 2021 - December 2022
